A web-based application to manage attendance using fingerprints assisting the team in working on projects given on the frontend and backend.

TECHNOLOGIES & TOOLS

Docker, Grafana, Prometheus, PM2, Linux Server Administration, Microservices Architecture, Application Monitoring, Server Optimization, Troubleshooting, Incident Management, CI/CD, and Infrastructure Management.

FULLSTACK DEVELOPER

KUMARA HEALTH (OCTOBER 2023 - NOVEMBER 2024)

- E-Commerce Kumara Health
Describes a web-based e-commerce platform for the sale of medical devices and pharmaceutical products, focusing on flexible and scalable B2C transactions. The system includes a price negotiation feature based on admin rules and a loyalty points program that can be used for discounts or product payments to increase customer retention.
The platform is enhanced with health education content to improve SEO and brand credibility. In addition to customer-facing applications, an internal dashboard with business analytics is available to integrate sales performance, customer behavior, and promotional strategies. The solution is built using PostgreSQL, Express.js, TypeScript, and React.js to support performance, scalability, and long-term maintainability.

FULLSTACK DEVELOPER

PT. SHIBLY TEKHNOLOGI SOLUTION (NOVEMBER 2024 - PRESENT)

- Bank Rakyat Indonesia (BRI) - Timor Leste

Developed and maintained multiple enterprise-scale digital banking and business management systems for Bank BRI Timor Leste, serving as a Full Stack Developer responsible for end-to-end application development, including system architecture, front-end interfaces, back-end services, API integrations, database design, and business process automation. Key projects included International Remittances, Asset Management Portal, Bank Guarantee Loan Platform, Human Resource Management System (HRMS), Merchant Portal, BRILink Dashboard, EDC Application, EFORM PWA, and Cross-Currency Transaction Platform, supporting both B2B and B2C operations. Additionally involved in rebuilding a large-scale e-commerce backend using Golang to enhance performance, scalability, and reliability. Technologies utilized across projects include PostgreSQL, Express.js, TypeScript, React.js, Node.js, and Golang.

- Air Navigation Administration of Timor-Leste (ANATL) - Timor Leste

Developed and maintained the ANATL Enterprise Resource Planning (ERP) System for ANATL, the government-owned airport enterprise of Timor-Leste, serving as a Full Stack Developer responsible for end-to-end application development, including system architecture, front-end interfaces, back-end services, RESTful API integrations, database design, and business process automation. The centralized ERP platform, equipped with Single Sign-On (SSO), integrates six core business modules: Finance, Human Resource Administration, Employee Self-Service (ESS), Procurement, Logistics, and Planning. By consolidating enterprise operations into a single platform, the system improves operational efficiency, transparency, cross-department collaboration, and real-time reporting while supporting stronger governance and ANATL's digital transformation initiatives. Technologies utilized across the project include PostgreSQL, Express.js, TypeScript, React.js, Node.js, and Golang.

SHOPIFY DEVELOPER -

PT. INTEGRASI MEGAKANAL AGENSI (NOVEMBER 2025 - JANUARI 2026)

- News Portal

This news portal web project is a web-based platform that combines content and monetization systems into a single ecosystem. The portal provides various types of article access, ranging from free content, content exclusively for regular members, paid members, and articles with a one-time payment system. In addition to reading articles, users can also purchase digital and physical products available on the platform.

The system features a reward mechanism in the form of points earned by completing daily, weekly, and monthly tasks. These points can be used as an alternative payment method to access certain paid articles, thereby increasing user engagement. The platform is built using Shopify and expanded with various supporting applications such as Helium Customer Fields for customer data management, Shopify Flow for process automation, Mikawa Subscriptions for subscription management, Matrixify for bulk data management, Transtore for translation needs, and Locksmith for content access management. This combination allows the portal to be flexible, secure, and capable of supporting various digital content business models.

Skill

• Object Oriented Programming	Expert	• Golang	Intermediate
• HTML	Expert	• Shopify	Intermediate
• Front End Development	Expert	• Typescript	Intermediate
